EXPLANATION

This is a very simple book, but an extremely useful one, for it does away entirely with multiplication or division. One has but to learn its logical arrangement and to apply the most elementary arithmetic to become at once an adept computer. It takes a great deal of time to multiply and divide numbers, and it is tedious, hard mental work, too, but worse than anything else are the errors that are unavoidably made. There is always some doubt at best, and to be reasonably sure of correct work it takes double time and labor. Without the usual loss of time or labor this book gives absolutely correct results. There is no doubting or puzzling or laborious checking; results are infallible. When unusually large numbers are dealt with, it may require one or more additions or subtractions to carry results to many places of decimals, but even this simple matter is performed so methodically that the chance for error is practically eliminated.

The result obtained by multiplying is called the **product**. A number to be divided is called a **dividend**. This book is a table of products when we seek the result of a multiplication, or it is a table of dividends when we seek the result of a division.

To illustrate the use and arrangement of the book as a table of products, let us find the product of 2×34 .

(a) To find **2**, turn to page twenty.

(b) Find **2** in bold face type in the upper left corner.

(c) In column 30, on line 4, find the desired product 68.

Division is the reverse of multiplication, and to illustrate the use and arrangement of the book as a table of dividends let us find the result of dividing 68 by 2.

(a) Find 2, on page twenty, as before.

(b) Find 68, in the body of the table.

(c) Note that 68 falls against 34, the desired result. (Meaning 68 is found in column 30, on line 4.)

The steps of taking out a result from the table are identical for every case of multiplication or division, respectively. With a knowledge of only the rudiments of arithmetic, nothing more than locating results and fixing the decimal point are required to master this book. Then, after a little observation and practice one attains great skill at figures. However simple the matter of placing the decimal point may be to most every one, it is a most important requisite when using the table. It must at all times be borne in mind and strictly applied, or inaccuracy and confusion are sure to follow.

A tabulation of the details of performing computations by means of the table is here set down as an illustration of the best way of getting results. You are earnestly urged to pay most particular attention to the decimal point and understand and trace out every step that is taken in treating the numbers as a means to learning the elegance and value of this method of reckoning.

† In every section the numbers in the top line are the products obtained by multiplying the section number by 20, 30, 40, 50, 60, 70, 80, and 90, respectively.

* Ciphers supplied in obedience to the rules for placing the decimal point.

‡ It will be appreciated that products so large as these are seldom met with in practice, the great majority falling within five places, nor is a number of more than three digits rarely used as a multiplier or divisor, except possibly in some branches of scientific work.

DIVISION

By the ordinary methods of arithmetic division is the most troublesome. In view of this fact the table is exceedingly valuable, for it does away with all tedious mental drill and simplifies the matter to merely pointing out the result, or in some cases perhaps a subtraction or two, to get quotients to many places of decimals. A few examples are given in the following, the last one being a case of dividing by a very large number. The method of procedure may prove interesting.

(a) 704)45760(65 Ans.

45760 see section **704** against 65.

(b) 497)3199689(6438 Ans.

31808** see section **497** against 64.

18889 !!

18886 see section **497** against 38.

3 remainder.

(c) 227649)8763269(38.49+ Ans.

8626*** see section **227 x 38**.

137269. partial remainder.

24662. equals **649 x 38**.

112607.00 !! whole remainder.

11123*.** see section **227 x 49**.

1377.00 partial remainder.

318.01 equals **649 x 49**.

1058.99 remainder.

!! Bring down two places in every instance. This is an important rule when dividing.

The steps in the foregoing examples are undoubtedly obvious without the detailed explana-

tion. Attention is called to the fact that the quotient 38.49 is obtained when the first whole remainder, 112607.00, is brought down, the remaining steps are shown for instruction only. In like manner it could be carried to 38.4946 by looking only against the next number below 105899** in section 227.

The tables in the back of the book will prove of inestimable service for the quick and accurate solution of cumbersome problems in mensuration. They are for those few numbers in common use of more than three figures.

The solution of a variety of problems first by the usual methods and then by aid of the table is recommended as the best way to get a working knowledge of the book. These are suggested:

To find the circumference of a circle multiply the diameter by
3.1416

To find the diameter of a circle divide the circumference by
3.1416

.7854

Is one-fourth of 3.1416 and is the number which when multiplied by the square of the diameter of a circle equals its area.
